

Core Technology® Service Bureau

OVERVIEW

The Core Technology® Service Bureau is a subscription service that provides access to a variety of information sources, including Michigan's law enforcement system, Michigan's Secretary of State, and LocatePLUS, without requiring the agency to purchase their own server software.

Small law enforcement agencies that do not have their own access to State of Michigan data may find it cost effective to connect to the Core Technology Service Bureau instead of connecting directly. The Core Technology Service Bureau can also be used by all agencies as a backup connection to critical information.

Whether large or small, the Core Technology Service Bureau can help law enforcement personnel arm themselves with the information they need to protect and serve.

BENEFITS

Save Money

- Affordable for small agencies with a small number of users.
- No need to buy expensive server hardware. Just connect to Core Technology's server.
- Reduce IT training costs by letting Core Technology administer and manage the server software.

Reduce Administration Cycles

- Simplifies network infrastructure requirements when providing wireless access for handheld devices.
- Keep your IT resources where they are most needed. No need for your IT staff to learn how to administer the software.

Expanded Access to Critical Information

- No longer do you need to rely on cross-jurisdictional support to get access to data you need. Connect your agency using the Core Service Bureau.

Disaster Recovery

- Use the Core Service Bureau as your backup server to the state's law enforcement system to ensure you always have access to critical data.

Always Up-To-Date

- Be assured that you will always have the latest software.
